

## P1620

Rectangle Double 1, operating handle

- Design: tensioned system with handle operation and two hangings
- Suitability: for vertical rectangular windows
- Curtain: available with two (2) different fabrics, each of which can cover the entire window area
- Installation: in the glazing bead, on the window frame, on the wall
- Operation: via the operating handle on the lower and middle profiles
- Operating option: Operating rod (anodised) in various lengths on request for an additional charge
- Profile colour: white, silver, bronze or black
- Tensioning: 0.8 mm tension cords in a colour matching the fabric; the number depends on the system width.

This pleated blind, featuring two different pleated fabrics, is ideal for particularly flexible lighting design, variable privacy, and sun protection. Each fabric extends the entire height of the system, thus covering the entire window area. By sliding the centre and bottom rails, the size of each fabric can be increased or decreased as needed, or even completely collapsed upwards. Just like a traditional pleated blind, the pleated blind can be screwed directly into the glazing bead, attached to the window sash using clamp brackets, or mounted using wall brackets.
