

P1720

Rectangle Double 1, cord brake

Blind with a pendulum protection/anti-swing mechanism (model 1725)

- Design: freely suspended system with two cord controls and two curtains
- Suitability: for vertical rectangular windows
- Curtain: available with two (2) different fabrics, each of which can cover the entire window area
- Optional: with pendulum protection
- Installation: in the glazing bead, on the window frame, on the wall or ceiling
- Operation: 1 pull cord with integrated cord brake per curtain
- Profile colour: white, silver, bronze or black
- Contemporary 22mm wide and 17mm high rail/profile
- Tensioning: 0.8 mm tension cords in a colour matching the fabric, the number depends on the system width

This pleated blind system, consisting of two different fabrics, offers exceptional flexibility in designing your privacy, heat, or light protection.

Each blind can be operated separately via a cord on each side and fully retracted or extended to the full height of the system.

To prevent the pleated blind from swinging when the window is tilted, simply select the "Swing Lock" option in the configurator. This option provides the pleated blind with additional lateral tensioning, which is mounted at the bottom with two tensioning feet.
